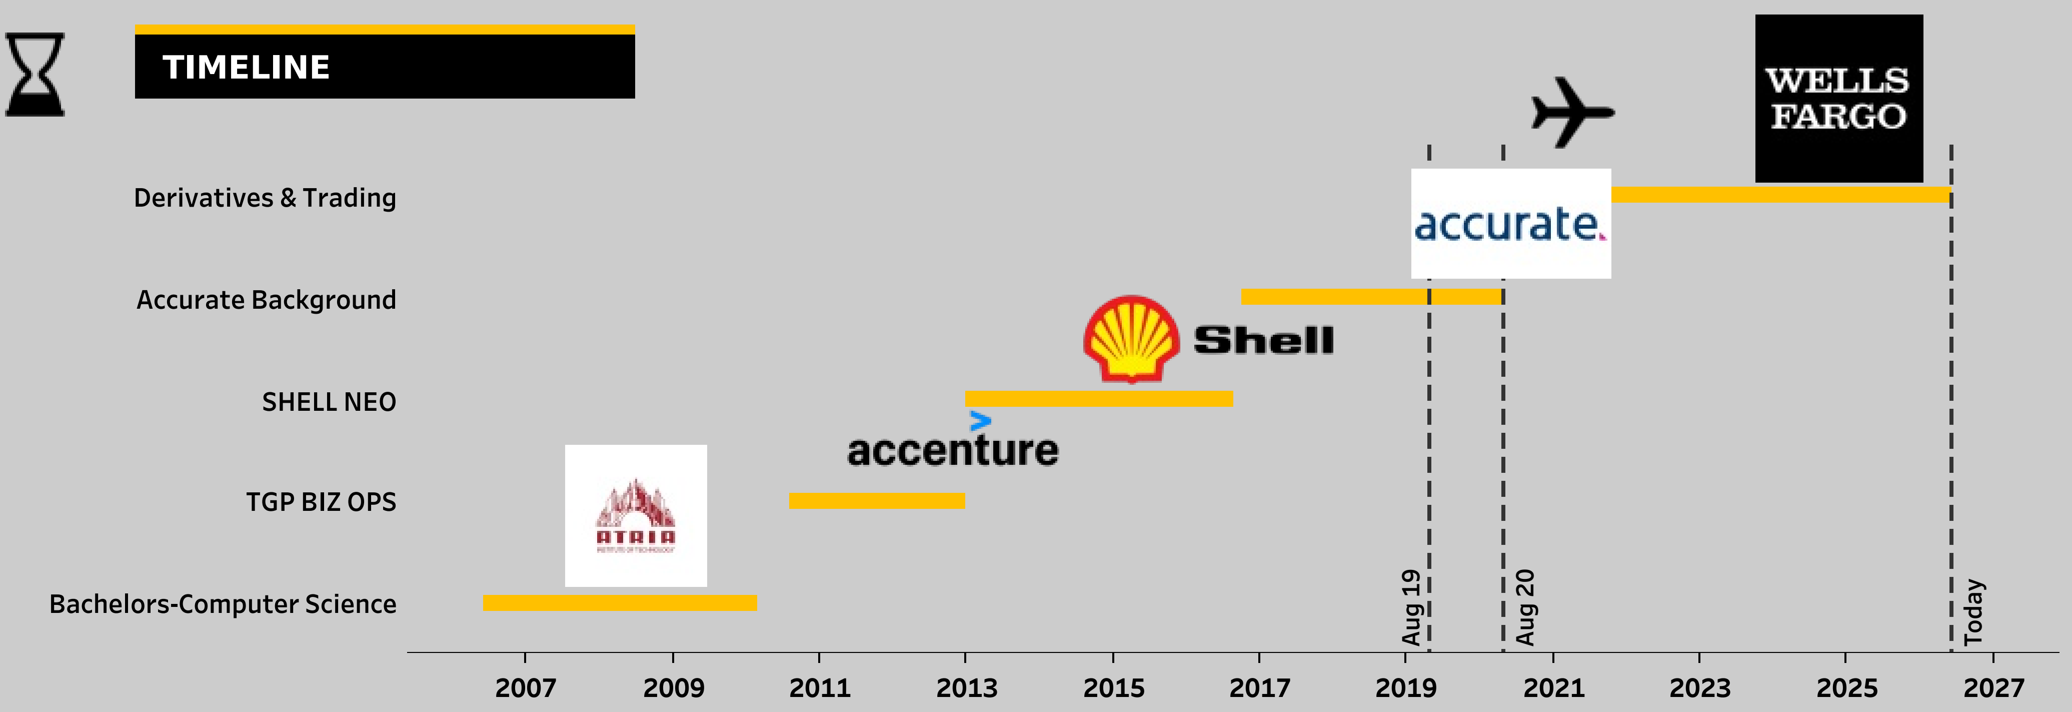
TIMELINE



FINSIGHT AI | Hedge Fund Portfolio Analyzer — PERSONAL BUILD . 2026

Developed an agentic AI-powered financial research platform for hedge funds using GPT-4o function calling and native OpenAI tool loops (5 autonomous tools: portfolio analysis, position history, RAG market search, market events, risk metrics). Built FastAPI backend with 18+ REST endpoints, WebSocket support, and SQL Server 2022 integration enabling real-time portfolio analytics and natural language querying. Implemented end-to-end real-time streaming pipeline: Finnhub → Apache Kafka → Apache Flink → ChromaDB processing 50+ tickers with sub-5-minute latency, handling 9,963+ trade messages and 128 volatility events. Designed comprehensive risk analytics engine with Historical/Parametric VaR (95%/99%), 6 stress test scenarios, alert thresholds via AWS EventBridge, and Bloomberg Terminal-style Next.js UI ..

MARGINMAESTRO | AI Orchestrated Margin Call Automation — PERSONAL BUILD . 2026

MarginMaestro automates the end-to-end margin call lifecycle — market event detection, exposure recalculation, threshold breach, human-approved client notification, and SLA-driven escalation — using LangGraph-orchestrated LLM agents (OpenAI GPT-4o-mini) with a RAG pipeline (ChromaDB, OpenAI embeddings) over legal/CSA policy documents for dispute rationale and entity resolution. Deterministic Python handles all financial math (MTM/VM/IM), while the LLM is scoped strictly to reasoning, retrieval, and notification drafting. Built on a Kafka streaming backbone with a FastAPI backend, Next.js frontend, Azure SQL persistence, and full OpenTelemetry/Prometheus/Grafana observability. Infrastructure is provisioned via Terraform and deployed live on AWS (EC2 with an Elastic IP, Secrets Manager, S3) with a Vercel-hosted frontend and Azure SQL for relational storage, backed by a GitHub Actions CI/CD pipeline with SonarCloud quality gating — a hybri..

TRADE LENS | AWS SPARK TRADE SURVEILLANCE PIPELINE — PERSONAL BUILD . 2026

Built TradeLens, an end-to-end big data pipeline on AWS that processes 50M+ trade/order events through Apache Spark (PySpark) to generate market analytics (VWAP, volatility, spread) and surveillance alerts detecting spoofing, wash trading, and layering, achieving 95–100% precision/recall against ground-truth abuse patterns. Implemented advanced Spark techniques including window functions, self-joins, broadcast joins, skew handling via key salting, Pandas UDFs, SCD Type 2 dimensions, and Delta Lake merge into with time travel across a bronze/silver/gold medallion lakehouse on S3. Containerized the pipeline with Docker and deployed it on AWS EMR Serverless with a full CI/CD pipeline via GitHub Actions (automated build, test, and image deployment). Delivered dual serving layers — Amazon Athena for ad-hoc analytics and Redshift Serverless for curated BI — visualized through Tableau dashboards, with the entire architecture designed to scale to zero cost when idle.

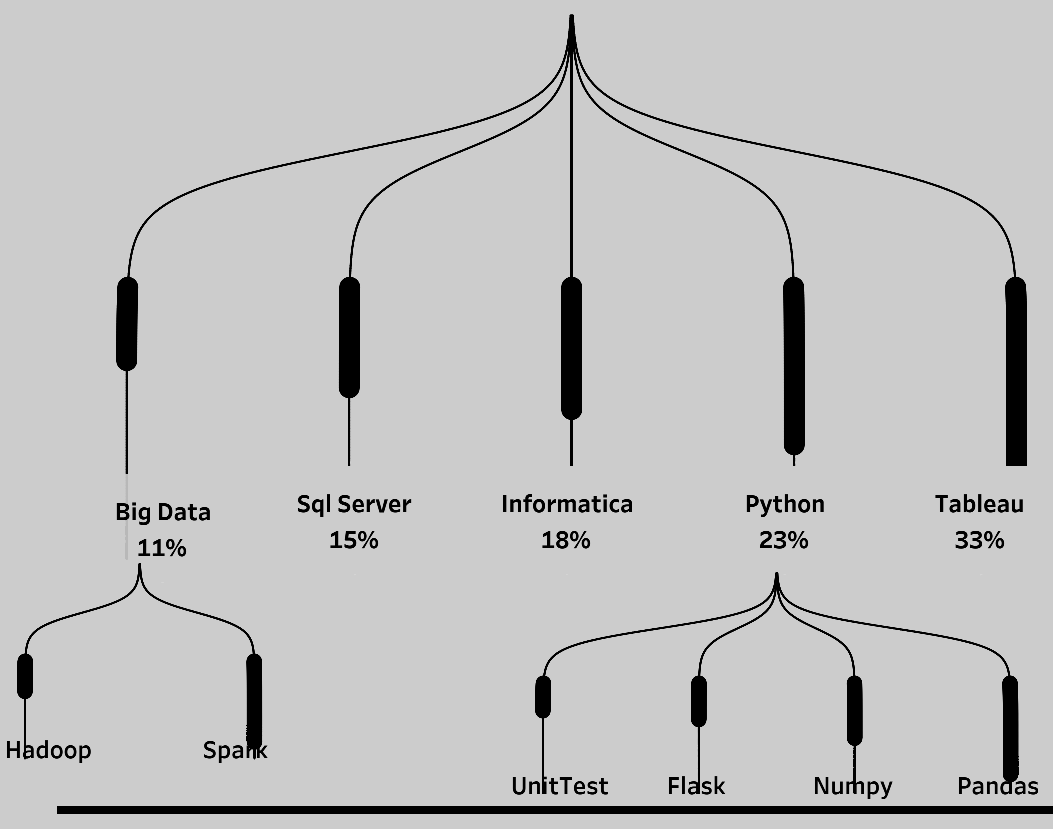
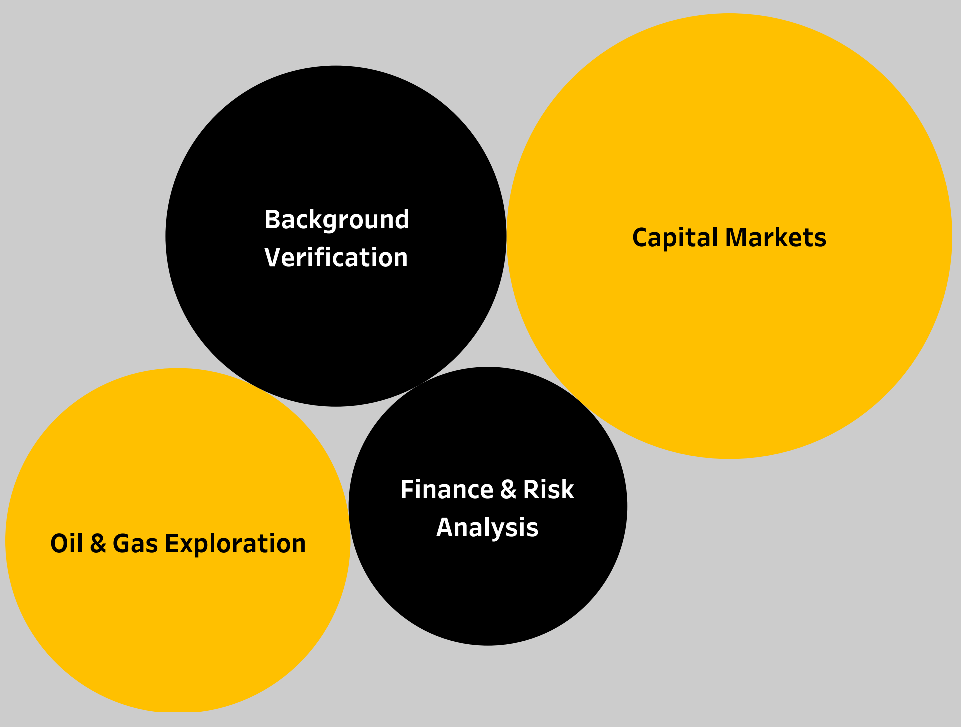
TOOLS USED DAILY



INDUSTRY



WELLSFARGO

Seasoned Data Engineer at Wells Fargo's Capital Markets Division, specializing in Dodd-Frank Act compliance and Section 165(d) submissions for living will requirements-resolution planning. Involved in timely regulatory reporting for Federal submission.

I have used Informatica for Ingesting data into Sql Server and used python as backend programming language and for api creation & written code coverage, used tableau for regulatory fed submission, used hadoop/spark for storing the data for auditing and reporting use cases. Github Copilot is used for development work.

I have participated in Technology Spotlight events and presented Sessions to entire wellsfargo india on Spark Streaming. I have utilized Microsoft Azure - Devops for Hackathon 2023. I have worked on Google Cloud Platform - Vertex AI - for Hackathon 2024. I have worked on OpenShiftContainerPlatform for Hacathon 2025. I have completed the derivatives training as part of Markets College Training program - a Capital Markets Initiative

Technology : Informatica, Tableau, Python, Sql Server, Hadoop, Spark

---

ENCORA LABS(CLIENT : ACCURATE)

Key member of Accurate's IT Business Intelligence and Analytics team, specializing in data cleansing, transformation, and the application of business logic for analytics purposes. Played a pivotal role in ensuring data accuracy and relevance for major clients such as Amazon, Uber, and Starbucks. Proficient in leveraging data-driven insights to drive business decisions and enhance operational efficiency. Demonstrated expertise in project lifecycle management, from conceptualization to deployment and post-launch support
I have used AWS-Redshift along with Tableau to fulfill real time reporting needs.

Technology : Microsoft-BI(SSIS, SSRS), Sql Server, Tableau, MongoDB, AWS-Redshift, AWS-DMS, Dimensional Modelling

---

ACCENTURE(CLIENT : SHELL)

Contributed to Shell's IT department as a data specialist, focusing on data cleaning, preparation, and extraction of actionable insights. Spearheaded project initiation, including requirements gathering, feasibility analysis, and stakeholder alignment to establish project scope and objectives. Managed the transition to production, collaborating with the production support team to facilitate a smooth handover and ensure operational readiness. Provided ongoing support during the post-launch phaseApplied expertise in SSIS, SQL Server, and Oracle to manage data related to crucial aspects of the energy sector such as directional survey and facility monitoring. Additionally, gained exposure to SAP HANA and SAP BODS for enhanced data processing capabilities.

Technology : SSIS, Sql Server, Oracle, SAP BODS/HANA

ACCENTURE

Played a vital role in an internal project at Accenture, focusing on financial reporting and risk analysis for top 100 clients. Led data engineering efforts using SSIS and SQL Server for ETL processes. Additionally, contributed to a certification initiative by managing delivery lead and solution architect programs, enhancing firm-wide operational efficiency

Technology : C#, SSIS, Sql Server, MS Access
